

**GLOBEC CRUISE PLAN**  
CRUISE HX283: 3-11 May 2004

**Funding Source:** NSF-NOAA (NA-67-RJ-0147)

**Chief Scientist:** Seth Danielson, Physics, [seth@ims.uaf.edu](mailto:seth@ims.uaf.edu)  
Institute of Marine Science  
University of Alaska  
Fairbanks, AK 99775-1080  
Phone: 907-474-7830

**Co-Chief Scientist:** Ken Coyle, Zooplankton, IMS-UAF (Upper 2)

**Scientific Personnel:** Discipline, affiliation, (bunk assignment)

Dave Aldrich	Marine Technician, IMS-SMC (M, Mar. Tech. Stateroom)
Amanda Byrd	Zooplankton, IMS-UAF (F, Forward 3)
Yihua Cai	Chemistry, IARC-UAF (M, Forward 2)
Russ Hopcroft	Zooplankton, IMS-UAF (M, Upper 2)
Markus Janout	Physics, IMS-UAF (M, Mar Tech. Stateroom)
Thomas Kline	Zooplankton, PWSSC (M, Upper 4)
Hui Liu	Zooplankton, IMS-UAF (M, Upper 4)
Stephanie Moreland	Nutrients/Chlorophyll, IMS-UAF (F, Forward 3)
Alexei Pinchuk	Zooplankton, IMS-SMC (M, Upper 4)
Rob Rember	Chemistry, IARC-UAF (M, Upper 4)
Melanie Rohr	Nutrients/Chlorophyll, IMS-UAF (F, Forward 3)
Jingfeng Wu	Chemistry, IARC-UAF (M, Forward 2)

**Scientific Purpose:**

The purpose of the NE Pacific GLOBEC Program is to develop a mechanistic understanding of the response of this marine ecosystem to climate variability. Toward that end, the GLOBEC cruises on the Gulf of Alaska shelf will determine the physical-chemical structure, primary production, the distribution and abundance of zooplankton, YOY salmon, other planktivorous fishes, and marine birds and mammals. These interdisciplinary cruises will occur over a seven-year period and throughout the year so that seasonal and interannual comparisons of the oceanography of this shelf can be made. Some of the data will be compared with historical data sets, whereas other data sets will be a product of the first systematic sampling effort from this shelf.

The May 2004 cruise marks the seventh consecutive May cruise conducted as part of the Gulf of Alaska GLOBEC program Long Term Observation Program (LTOP). Cruise activities concentrated on physical oceanography (circulation and thermohaline structure), nutrient and chlorophyll concentrations, zooplankton, seabird and marine mammal distributions. Zooplankton were sampled for C-N stable isotope composition and experiments were established to estimate zooplankton growth rates and egg

production and primary production. May characterizes late spring/early summer conditions in the Gulf of Alaska.

### **Cruise Objectives:**

1. Determine thermohaline, velocity, and nutrient structure of the Gulf of Alaska shelf, emphasizing Seward Line, C. Fairfield Line, Prince William Sound stations, and offshore PWS stations (Table 1). Other lines as time permits.
2. Determine primary production and phytoplankton biomass distribution.
3. Determine the distribution and abundance of zooplankton.
4. Determine the distribution and abundance of seabirds and marine mammals.
5. Determine copepod and euphausiid rates of growth and egg production.
6. Characterize the carbon and nitrogen stable isotope concentrations in zooplankton.
7. Test IARC Iron sampling equipment and collect surface and vertical profiles of Iron concentrations.

## **SAMPLING**

### **DAYTIME ACTIVITIES**

1. Occupied the hydrographic transects (Table 1) and collected vertical CTD-chlorophyll-PAR profiles.
2. Collected ADCP, sea surface salinity (SSS), temperature (SST) and fluorescence (SSF) using seacrest sensors,
3. Collected discrete bottle samples at these stations for nutrients and chlorophyll pigments. Chlorophyll Size Fractionation was done at the whole numbered Seward Line stations and at every other C. Fairfield Line station.
4. Measured Primary Productivity at Stations GAK1, GAK4, GAK9, GAK13, and KIP2.
5. Observed and documented marine mammal and seabird distributions from the bridge.
6. One CalVet Net cast was done (the CalVet frame has 4 nets) on the Seward Line stations and at selected PWS stations. There were two fine mesh nets (.053mm) and two large mesh nets (.150mm) on each tow.
7. At Seward Line stations GAK1, GAK4, GAK9, GAK13) and KIP2 station Liu performed 3-6 casts with the 10-liter Niskins/Rosette to collect water (from 10-20m) for zooplankton incubations. This was accompanied by two to three ring net tows over the upper 50m.
8. We did deep MOCNESS tows (to 600 m) near the end of the Seward Line at station GAK13 and at station PWS2.
9. Iron sampling consisted of vertical hydrographic casts with bottles strapped to the hydrowire (tripped with internal electronics) and bottles tripped with a messenger on a synthetic line and with samples taken by a surface collection bottle tied to a pole.

## NIGHTTIME ACTIVITIES

1. Hydroacoustic samples and MOCNESS discrete samples were taken along the Seward Line, and at select PWS and Hinchinbrook Entrance Stations (see Event Log for details).
2. In addition to the normal .5mm mesh nets, fine mesh nets (.100 mm) were swapped into the MOCNESS at intermittent stations for euphausiid collection.

A detailed sampling schedule is contained in the Cruise Event Log appended to this report.

### **Cruise Chronology:**

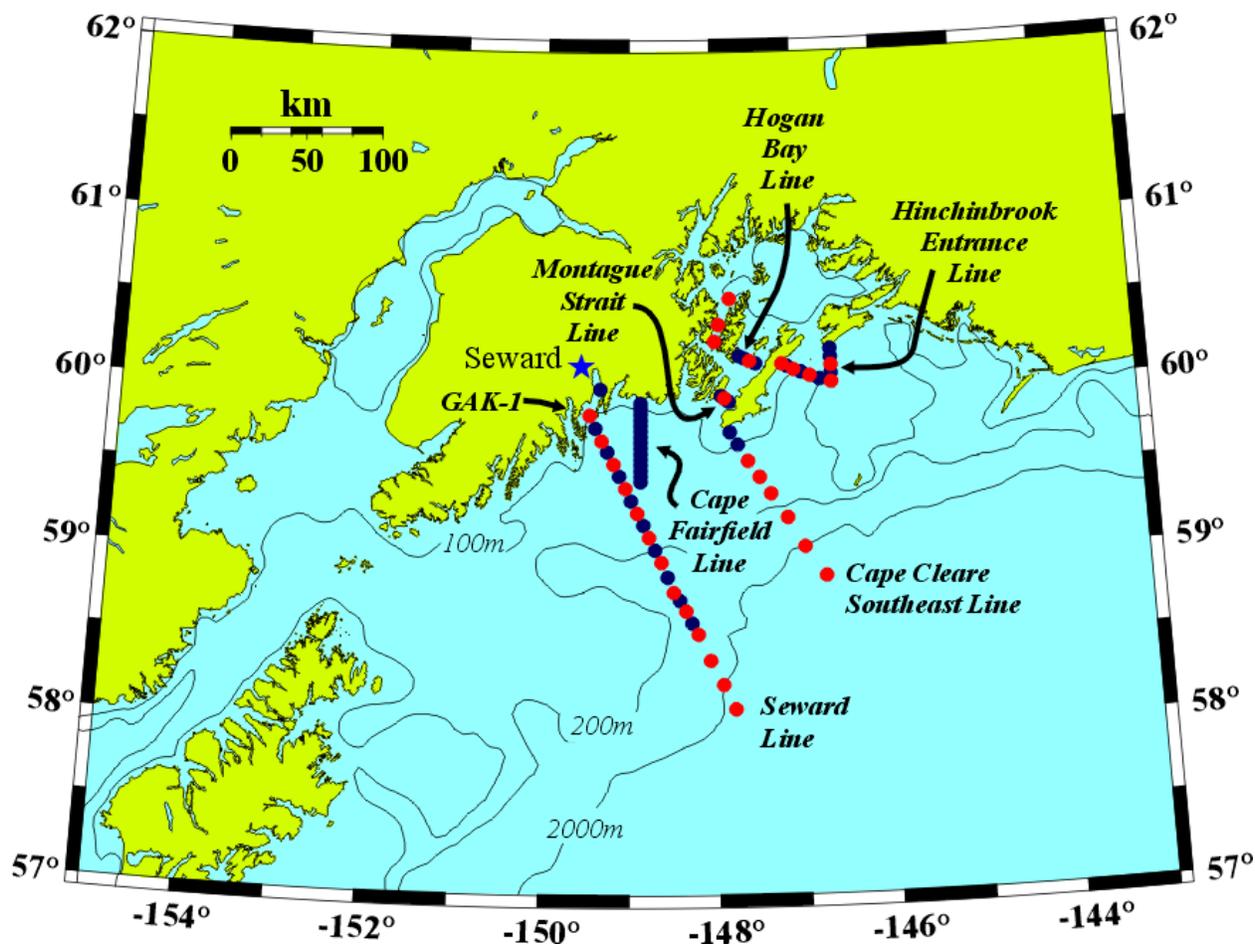

We departed the Seward IMS dock at 09:52 on 3 May, tested the HTI in Resurrection Bay and transited to the outer portion of the Seward Line to begin our work, given a good weather forecast. We started nighttime activities at GAK11 and worked toward the offshore end of the line from there. Excellent weather and calm seas continued for the entirety of the cruise. We proceeded to sample the remainder of the Seward Line then the Cape Fairfield Line, the Hinchinbrook Entrance Line, The Hogan Bay Line and Montague Strait. Deep Sea winch breaker was still giving problems and motor finally became inoperable on 9 May in Knight Island Passage. We terminated sampling until daylight at which time we were able to arrange for parts to be shipped to Whittier. We continued our sampling until 10 May (including MOCNESS sampling, having scavenged the drill press motor to run the deep sea winch hydraulics). On May 10 we were able to pick up a new winch motor in Whittier and we were able to complete our sampling in Prince William Sound. On the last day of the cruise we were able to sample the CCSE line and do one more iron experiment in offshore waters. We returned to Seward on 12 May early in the morning.
